INTELLIGENT
AROUND VIEW[®] MONITOR[†]
360° VIEWS MAKE
PARKING EASIER
THAN EVER

DON'T BUMP
YOUR HEAD

In Drive, the display gives you both a front and overhead view, so you know just how far to pull up, without going too far.

SWITCH ANGLES
AGAIN AND AGAIN

In Drive or Reverse, you can push the camera button to switch out the overhead for a side view. A great help for seeing how close you are to the kerb.

COMPLETE
THE PICTURE

Located under your side mirrors, these cameras help round out your virtual 360° bird's-eye view, whether you're in Drive or Reverse.

EYES IN THE BACK
OF YOUR HEAD

In Reverse, the display helps you see what's directly behind you, while the overhead view helps with smaller objects that might be hidden below your window.

Driver's aids only and should not be used as a substitute for safe driving practices. Always monitor your surroundings when driving.

GET A HAND WHEN YOU WANT IT

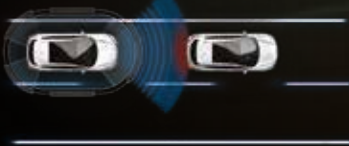

STEPS IN WHEN YOU NEED IT

Nissan's Intelligent Mobility Driving technologies use advanced radar technology to constantly monitor activity going on around you, keeping tabs on the traffic and helping you handle any unexpected situations.

INTELLIGENT LANE INTERVENTION[†]

When driving, if the vehicle senses that you may be veering outside of your lane, the vehicle will apply subtle brake pressure to help keep you on the safe path.

INTELLIGENT EMERGENCY BRAKING[†]

Using rader technology to keep an eye on your proximity to the vehicle ahead of you, Forward-Collision Warning can give you audible and visual display warnings to help you know when to reduce your speed. If required, the Intelligent Emergency Braking[†] will apply braking to reduce vehicle speed to avoid or reduce the severity of a collision.

BLIND SPOT WARNING^{††}

Boost your vision: the system will warn you if there are vehicles in the blind spots diagonally behind the car.

[†]Driver's aids only and should not be used as a substitute for safe driving practices. Always monitor your surroundings when driving

RESPONDS SEAMLESSLY TO THE ROAD AROUND YOU

The Nissan QASHQAI is an exhilarating drive thanks to Nissan's Chassis Control technologies -it gives you greater agility and responsiveness, yet still manages to be smooth to handle and secure to drive.

INTELLIGENT ENGINE BRAKE

This technology adds engine braking and reduces the burden when cornering or braking for vehicles fitted with CVT. By minimising the frequency and effort normally required to brake the vehicle, it makes for an easier and more comfortable drive.

ADAPTIVE FRONT LIGHT SYSTEM (AFS)^{*}

AFS improves your night visibility. When you're on a dark, winding road AFS changes the angle of the light to compensate for any curve and if you're at a crossroads it illuminates your chosen direction - either to the left or right.

INTELLIGENT RIDE CONTROL

Take the rough with the smooth. This system applies subtle braking to prevent disturbance when encountering bumps and ensures a comfortably smooth ride.
